Todo-app.jsp

```jsp
<%@ page import="java.util.*" %>

<html>

<body>

<!-- 1. Create HTML form -->
<form action="todo-demo.jsp">
        Add new item: <input type="text" name="theItem" />

        <input type="submit" value="Submit" />
</form>

<br/>

<!-- 2. Add new item to todo list -->
<%
  // get todo items from the session
  List<String> items = (List<String>) session.getAttribute("myTodoList");

        // If the todo items doesn't exist, then create a new one
        if (items == null) {
                items = new ArrayList<String>();
                session.setAttribute("myTodoList", items);
        }

        // see if the form data to add
        String theItem = request.getParameter("theItem");
```

```jsp
			if (theItem != null) {

					items.add(theItem);

			}

%>

<!-- 3. Display all todo items from session -->
<hr>
<b>Todo List Items</b><br/>

<ol>
<%

		for (String temp : items) {

				out.println("<li>" + temp + "</li>");

		}

%>
</ol>
</body>

</html>
```
